SERVICE BULLETIN — MAIN LANDING GEAR RETRACTION ACTUATOR

1. COMPONENT IDENTIFICATION & APPLICABILITY

Component Identifier: LG-002
Component Nomenclature: Main Landing Gear Retraction Actuator
Aircraft Applicability: Airbus A320-271N / A321-271NX Fleet equipped with CFM LEAP-1A engines.
Purpose: Definition of operational limits, installation torques, part supersession, and maintenance thresholds.

2. TECHNICAL SPECIFICATIONS & TOLERANCES

Parameter Description	Engineering Value	Standard / Remarks
Actuator Assembly Part Number	P/N 20145-02	Supersedes P/N 20145-01
Seal Operating Pressure Rating	2950 PSI	Operating Pressure (Updated)
Lock Nut Torque Limit	275 ft-lbs	Assembly Torque (Updated)
Major Overhaul Life Limit	10000 Flight Cycles	Life Limit Threshold (Reduced)

3. MAINTENANCE & ACCOMPLISHMENT INSTRUCTIONS

Perform visual inspection for chrome plating micro-cracks on piston rod surface. Grease pivot bearings with Aeroshell Grease 22 during scheduled C-checks. MANDATORY ACTION: Life limit reduced to 10000 Flight Cycles following fatigue life reassessment by stress engineering.

CONFIDENTIAL & PROPRIETARY — FOR USE BY CERTIFIED OPERATOR ENGINEERING PERSONNEL ONLY.
